

ABOUT ME

Radiant, proactive, and motivated.

I am driven by a profound interest in post-humanist philosophy and its transformative insights into the interconnectedness of humans, technology, and the environment. My academic journey demonstrates a strong commitment to exploring planetary urbanization, focusing on the intricate relationships between global urban systems and ecological resilience. Passionate about uncovering hidden connections, I utilize data analysis and coding to translate complex systems into engaging virtual forms, effectively bridging theory and practice through generative design.

DIGI-SKILLS

Excellent in Autocad 2D, Sketchup, Rhino, Office suite, Adobe Creative Cloud
Intermediate in Grasshopper
Familiar with Python and TouchDesigner

LANGUAGE SKILLS

Italian: Native Speaker
English: B2 level
French: Basic level

EDUCATION

- [Mar. 2025] **Architectural Computation MSc** (Admitted, not enrolling) - UCL London, United Kingdom
- [Sep. 2025] **M.S. Computational Design Practice** (Admitted, not enrolling) - Columbia University New York, U.S.
- [Feb. 2022 - Dec. 2024] **Master Degree in Built Environment, Interiors** - Politecnico di Milano, Italy
- [Oct. 2018 - Mar. 2022] **Bachelor Degree of Science in Architectural Design** - Politecnico di Milano, Italy
- [Sep. 2013 - Jul. 2018] **High School Diploma (Scientific Studies)** IIS "Quintino Sella" Biella, Italy

PERSONAL PROJECT

- [Dec. 2024] **Éclat – Interdisciplinary Architecture and Design Collective**
Co-Founder | *Team members: Maddalena Adriano, Gaia Lucchina, Riccardo Molteni, Michelle Nuccio*
Éclat is an architecture and design collective founded in 2024 during an academic encounter. The name Éclat, inspired by Édouard Glissant's theory, refers to a "burst of light" that unveils hidden dynamics. Éclat investigates the intersection between ecology and geopolitics through interdisciplinary theoretical research and computational design methodologies. The collective seeks to develop new languages and paradigms for architecture to address today's global and local challenges.

EXHIBITIONS

- [03 Oct. 2025 - 12 Oct. 2025] **Ec(h)o-es in the Rings**
Bolzano Art Week (BAW) - V edition, Palazzo Campofranco
Research developed by Éclat, curated by Michelle Nuccio and Riccardo Molteni.
Ec(h)o-es in the Rings is a site-specific installation celebrating the Ginkgo biloba of Palazzo Campofranco, a symbol of urban resilience. Through sonic tomography and microscopic analysis, the tree becomes an ecological and political archive — a silent voice of nature within the city. Featured in "Exhibart" (July 2025) and "Espoarte Contemporary Art Magazine" (October 2025).
- [May 2025 - Nov. 2025] **Maru. Mare Debole**
Italian Pavilion – 19° Venice Architecture Biennale 2025
Research developed by Éclat
A critical and poetic investigation into the relationship between humans and the sea, challenging the anthropocentric logic of domination. Drawing from Kantian philosophy, the project reimagines the Mediterranean not as a frontier to be occupied, but as a relational space where weakness becomes a source of mutual care and ecological awareness.

PUBBLICATIONS

- [2026, forthcoming] **"LEFT(L)OVER. Questioning Waste as Contemporary Mines through Epigenetic Landscape."**
Michelle Nuccio and Riccardo Molteni.

Left(L)over is an open work that aims to investigate the waste produced by our society, focusing not only on past types but also on more contemporary ones, such as sustainable infrastructures. The work challenges the conventional idea of waste as an inert element, treating it instead as an active and influential force.

Our book proposes a research methodology developed in multiple phases. It begins with the analysis and understanding of data, which are then integrated into our theoretical framework to provide a global and planetary vision of the issue. Subsequently, the data are georeferenced through a mapping process, establishing connections between the analyzed waste and the surrounding ecosystem and environment, highlighting their interactions.

Finally, the initially invisible data are made visible through coding processes. This step allows the exploration of new forms and relationships, both in the virtual and real realms, thus paving the way for a deeper and more innovative understanding of the phenomenon.

[2026, forthcoming] **"Dwelling in the Opaque"**

Michelle Nuccio in "Who is Speaking?", edited by Elisa Cattaneo with Maddalena Adriano, Monica Dell'Acqua, Riccardo Molteni, Michelle Nuccio and Rosie Rao

Theoretical essay exploring waste as a relational, temporal, and ecological phenomenon. Drawing on thinkers like Glissant, Haraway, and Morton, the text argues for embracing complexity and opacity in how we perceive and inhabit waste. It critiques dominant logics of control and purification, proposing instead a post-anthropocentric, situated approach to coexistence, exemplified by the practices of Cairo's Zabbaleen community.

ACADEMIC EXPERIENCES

[Sep. 2026] **University Teaching Assistant | Theory in Contemporary Architectural Design**

Politecnico di Milano

Teaching Assistant for the course "Theory in Contemporary Architectural Design" held by professor Elisa Cristiana Cattaneo. Supporting students in understanding the concept of devices, following Agamben's definition, generated by modern and contemporary society, their origins and internal dynamics, and how they collectively shape and transform the landscape.

[Sep. 2025] **University Teaching Assistant | Workshop Urban Narratives**

Domus Academy, Milano

Teaching Assistant for the "Urban Narratives" workshop with professor Elisa Cristiana Cattaneo. Provided Grasshopper tutorials and hands-on support, guiding students in spatial data analysis and visualization using QGIS and parametric tools.

[Mar. 2025] **University Teaching Assistant | Workshop Codify Ecology**

Domus Academy, Milano

Teaching Assistant for the "Codify Ecology" workshop with professor Elisa Cristiana Cattaneo. Provided Grasshopper tutorials and hands-on support, guiding students in spatial data analysis and visualization of the Lombardy region using QGIS and parametric tools.

[Fall 2024] **University Teaching Assistant | Theory in Contemporary Architectural Design**

Politecnico di Milano

Teaching Assistant for the course "Theory in Contemporary Architectural Design" held by professor Elisa Cristiana Cattaneo. Supported students in the analysis of sites identified as weak, following Andrea Branzi's concept of debolezza, as they are affected by geopolitical and environmental conditions. Guided them in exploring how these sites can be interconnected through the hologrammatic principle.

[Fall 2020 - Spring 2021] **University Teaching Assistant | Laboratorio di Progettazione II**

Politecnico di Milano

Teaching Assistant for the Design Studio 2 course with professors Francesca Belloni and Francesco Bruno, supporting students during composition reviews and delivering a lecture on Photoshop for architectural representation

SEMINARS

Domus Academy, Milan [30 Set. 2025] **LEFT(L)OVER. Questioning Waste as Contemporary Mines through Epigenetic Landscape**

Domus Academy, Milan [4 Feb. 2025]

Politecnico di Milano [17 Dec. 2024]

The presentation of my Master's thesis, conducted in collaboration with Riccardo Molteni, is titled "LEFT(L)OVERS: Questioning Waste as Contemporary Mines through Epigenetic Landscape." It is situated within Neil Brenner's framework of Planetary Urbanization, which explores the global evolution of urbanization as a planetary phenomenon.

Our research builds on Bruno Latour's Actor-Network Theory and Conrad Waddington's Epigenetic Landscape, challenging conventional perceptions of waste. We view waste not as inert residue, but as an active and influential force. This perspective aligns with Timothy Morton's concept of waste as a "hyper-object." We began our research with data analysis and mapping, drawing inspiration from James Corner's methodologies to trace how waste evolves over time and space, shifting from global impacts to localized instances. In the final phase, we focused on key locations that captured our attention, utilizing landscape design as an exploratory tool to study three distinct types of waste.

Coding played a vital role in this stage, revealing hidden processes that only became apparent through data analysis. Our research culminated in a response inspired by a dialogue with Alan Berger, Professor of Landscape Architecture at MIT, to whom we extend our gratitude. We envision not a waste-free city, but one that thrives through waste, where remnants inspire regeneration, and forgotten fragments become central to urban life.

MILANO ANNI 2000. Futurismo: il sottile filo tra arte ed architettura.

Developed as part of a university project, the exhibition explored the symbiotic relationship between art and architecture in Futurist production, highlighting how these two elements blend seamlessly. It showcased the ways in which architectural works are depicted in art and how they are influenced by Futurist aesthetics. A thin metal wire guided the layout of the exhibition, creating an ephemeral architecture within a courtyard. This design reinterpreted Futurist iconoclasm while contrasting with the historical structure.

WORK EXPERIENCES

[Nov. 2025 - current]

Collaboration | VMR architettura

Brescia

I collaborate with an architecture studio, contributing to projects at different stages of development. I am currently involved in the design of a dance school in Rho, a cloistered monastery in Lombardy, and an office space for a financial company in Rome.

[Jul. 2025 - current]

Collaboration for the Mapping Service | Urban Agenda Brescia 2050

Brescia

Collaboration on the mapping of participatory processes and ecological-environmental data related to the activities of the Urban Center within the Brescia 2050 Urban Agenda, and the production of a book documenting the entire participatory process.

[Mar.2024 - Sep. 2024]

ESG Research Intern

IL PRISMA, Milano

Engaged in DEI research focused on inclusive, quality spaces and psychophysical well-being. Collaborated with the ESG+Sustainability team on WELL, WELL Rating, and FITWEL protocols. Actively involved in Cantiere Sociale, promoting community projects with local associations and cooperatives.

[Jun. 2023 - Jul. 2023]

Workspere Design Intern

IL PRISMA Architettura, Milano

Assisted design teams in developing concept presentations and strategic narratives, producing visual materials and supporting project communication across all phases—from early studies to final layouts and infographics.

SOCIAL ACTIVITIES

[Dec. 2020 - current]

Community Support through Family-Owned Business

Torrazzo

In response to the progressive depopulation of Torrazzo, a village of just over 200 inhabitants, my family chose to invest in the revitalization of the local economy by re-activating three essential facilities: a restaurant, a grocery store, and a bed and breakfast. I actively contributed to this local regeneration initiative by: supporting kitchen work and front-of-house service at the family restaurant, managing bookings and guest relations for our Airbnb accommodation and designing promotional materials for seasonal events and local communication.

These efforts helped transform Torrazzo into a welcoming stop along the Cammino di Oropa, a pilgrimage route that now attracts travelers from all over the world. The revitalization of hospitality and basic services has contributed to preserving the village's social fabric and encouraging new forms of slow tourism and local development.

[2015 - current]

Member of Pro Loco Torrazzo

Torrazzo

Local non-profit association dedicated to promoting the cultural, social, and touristic life of the village. I actively contribute to the organization and support of community events and local initiatives.
